DETAILED ACTION

Application Status

1. Claims 1-59 are pending in the instant application.

Restriction

2. Restriction to one of the following inventions is required under 35 U.S.C. § 121:
 - I. Claims 1-55 and 59, drawn to macrocyclization methods using a substrate with an activated acyl residue and a nucleophile for an intramolecular reaction, classified in class 435, subclass 121.
 - II. Claims 56-58, drawn to macrocyclic compounds, classified in class 568, subclass 305.
3. The inventions are distinct, each from the other because of the following reasons:

Groups I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the products can be made by a materially distinct process, such as total organic synthesis or purification from a natural source. These methods are distinct from the methods of Group I because they do not use purified enzymes. Thus, Groups I and II are patentably distinct. Because these inventions are distinct for the reasons given above and have acquired a separate

status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Restriction of Species

4. This application contains claims directed to the following patentably distinct species of the claimed invention:

In Group I,

- methods using substrates with activated ester functional groups and
- methods using substrates with activated thioester functional groups.

These methods are patentably distinct because the substrates used in the methods have distinct structures.

Applicant is required under 35 U.S.C. § 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, Claims 1-8 and 34-41 are generic. Claims 9-10 are drawn to the ester species, and Claims 11-33, 42-55, and 59 are drawn to the thioester species.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 C.F.R. § 1.141. If claims are added

after the election, applicant must indicate which are readable upon the elected species. M.P.E.P. § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103(a) of the other invention.

Conclusion

5. A complete response to the instant Office action must include an election of invention of be examined. If Group I is elected, an election of species is also required.
